

# Supply Chain Makeover

## Challenge

A young automotive OEM faces reduced profitability due to increased production costs, inefficient supply chain management, high working capital and faulty processes

## Approach

Detailed study of existing processes

Lean methodology to drive process excellence

Data driven approach to address the areas of concern

Mapping processes to productivity and benchmarking each step

## ★ Results ★

65%

65% reductions in inventory value over a year

Process optimization through digitization

USD 70K inventory cost savings

Buying strategy optimization

Robust inventory forecasting methods

Increased profitability
